YOUR "SMART" CHOICE IN TV LIFTS

1. HOW DO I PICK THE CORRECT LIFT FOR MY APPLICATION?

If your application requires your TV to travel up from a cabinet, wall or floor refer to the Model 1000-5000 type lifts listed in the LIFTS section of the website. You will need to know the **HEIGHT** of your TV, not to be confused with the size of your TV. A 42" Plasma may have a **HEIGHT** of 28". In this case you would choose a lift that is equal or greater than the "**HEIGHT**" of your TV, the Model 3500 would work. If you require your TV to travel further than the 35" for your particular application then you would move up to the next size lift.

Finally if your require the lift to rotate the TV you would add the "R" suffix. In the case above the part number would then become Model 3500-R.

If your application is a Attic drop down, Fire Place Drop Down, Book Shelf drop down or other type of drop down you would then use the ADL series of lifts. Please refer to the LIFT section of the webpage for the specs on these units.

2. CAN I SET THE TOP AND BOTTOM TRAVEL LIMITS OF THE LIFT?

Yes, using the HAND HELD PROGRAMMER, (which included) you can set the upper and lower travel limits. Once set your lift will travel between the set points you programmed. Store the programmer for possible use at a later date.

3. WHAT IF I CAN'T FIND A LIFT SYSTEM THAT'S RIGHT FOR MY APPLICATION??

No problem. Our Design Engineers have over 35 years experience in designing and building custom automation systems. You can be confident that we will deliver a system

that will meet and exceed your expectations. Simply contact us with the particulars of your application and we'll do the rest.

4. DO I NEED TO WORRY ABOUT WHICH MAKE OR MODEL TV I USE?

No, not at all. All the lifts come with a UNIVERSAL MOUNTING systems that is fully adjustable, therefore able to accept any bolt pattern found on the back of your FLAT PANEL TV, be it Plasma or LCD.

5. CAN I CHANGE MY TV TO ANOTHER AT A LATER DATE?

Yes you may. Again as pointed out in question 2 simply check the HEIGHT of your new TV and make certain it's not greater than the travel stroke of your current lift.

6. DO I HAVE TO USE LCD OR A PLASMA TV?

No. Although Plasma and LCD are by far the most commonly used TV's , we can, with the correct configuration, lift not only regular TV's but Bar's, Beds, Wood boxes, etc. this we leave to your imagination!!

7. DO I GET A REMOTE CONTROL TO ACTIVATE MY LIFT?

We have available to our customers 4 different methods of activating the lift.

- a) **RF or Radio Frequency**, is very much like a garage door opener. It is not line-of-sight which means the signal will travel through walls and you need not point it at the TV to make it work.
- b) **IR or Infra-Red** works like the remote control on your TV, it is line-of-sight and it needs to be pointed at our receiver. When this option is ordered you get the receiver and then you need to program your Universal remote Control to LEARN the "codes" that operate the lift. For this you can refer to our "Installers Corner" for detailed instructions.
- c) **LV or Low Voltage**, all our lifts come standard with this option. The LV option is commonly used with Home Automation Systems such as Crestron, AMX and Control 4 to name a few. You simply assign a set of contacts to OPEN and CLOSE causing the lift to go up/down.

- d) **LS or Load Sensor**, this option allows you to activate the lift through the operation of your TV. If the TV is turn ON the lift goes up, when turned OFF the lift goes down.

8. WHAT ABOUT SAFETY?

A very important point we take very seriously.

All our lifts come standard with a “FLOATING-LID” mechanism.

The purpose and operation of this systems is as follows.

In an application where there is a LID attached to the top of the lift, i.e. cabinet, half wall etc the “LID” rides on the Floating Lid Mechanism. If someone’s hands are in the way of the lid as it is being retracted to the close position the Floating Lid will disengage the lid from the lift as it continues to travel downwards, refer to the Technical Drawings for details.

This doesn’t mean it may not hurt as you will be bearing the weight of the lid, 10-20 lbs. or whatever the case may be. It simply means you will not have the driving force of a motor coming down on your hand. Slip your hand out and gravity will place the lid back in place.

We want to make clear to our customers that the intellaLIFT is NOT a toy and is to be used responsibly and with common sense and care.

ALWAYS observe the lift prior to operating to ensure that no person is in the way so as not to possibly cause them any harm.

9. WHAT ABOUT GENERAL MAINTENCE FOR THE LIFT?

Our lifts are maintenance free, no oiling or greasing is required.

10. HOW OFTEN CAN I OPRATE THE LIFT?

Our lifts have a 10% duty cycle. This means if the lift takes 5 seconds to go up, $5 \text{ sec} \times 10 = 50$ seconds, you should wait 50 seconds before driving it down. If you stay within the 10% duty cycle of the lift, although we don’t recommend it, you can operate it all day long.

11. WHAT IS THE WARRANTY ON THE TELE-LIFT?

All our products have a **5 YEAR WARRANTY**.

12. CAN I PURCHASE DIRECTLY FROM THE FACTORY?

As we are still setting up the North American distribution channels and not all states and provinces have yet been covered therefore you are able to purchase directly from us.

13. WHERE DO YOU SHIP FROM? AND TO AND WHAT IS TYPICAL DELIVERY TIMES?

Currently we are shipping from the Eastern and Western coasts of the United States as well as Ontario in Canada.

We ship world wide.

As for delivery times they vary from 1 week to 4 weeks, depending on the model TV LIFT ordered.
